Davico Split Y-Pipe Converter Assemblies

Many of today's vehicles are manufactured with large Welded Y-Pipe Converter Assemblies. While most installers prefer an O.E. Style replacement, the shipping costs for these parts can sometimes be very costly. UPS, FedEx and other freight carriers usually add a surcharge to these oversized and unboxed parts driving single piece freight costs to higher than normal levels.

To help our customers save freight costs when stocking and re-shipping these parts, we offer many of them as Split Y-Pipe Converters, splitting and selling them as a left and right Converter component. When this option is available you will see the following footnote in our Catalog:

“OE system is a welded assembly. Left and right component is required for full replacement”

It is important for your customer to understand that just purchasing one side is not made to fit with the other side of the OE part. These replacement parts are sized and designed to fit together either with a simple muffler clamp or a welding step. They are NOT designed to be sold individually and hence, are not returnable when purchased as single side parts.

EXAMPLE: Our late model Ford Truck 5.4L application is our part number 19017 for the O.E. Style Welded Assembly replacement. To order it as a split part and save shipping costs you would order our part numbers 190171 & 190172. Please note there may be a slight difference in cost of the two split parts.

Please see our online catalog at www.davicomfg.com for the most up to date listings on these cost saving Split Y-Pipe Converter Assemblies. We will continue to add to this product segment to better service our customers needs throughout the coming year.
